

LICENSE MODEL

PuriFile is offered in several different licensing models:

SINGLE-USER / STANDALONE

The PuriFile single-user license is a non-networkable, single machine install of PuriFile. The single-user license includes access to the PuriFile web client, PuriFile Shell Extensions, PuriFile Explorer and the PuriFile Assistants. The single-user license is sold per desktop installation. For customers who have many users, we offer both volume-band discounts as well as the PuriFile enterprise license model.

CLIENT / SERVER

The PuriFile client / server license is a networkable version of the PuriFile single-user license. The client / server license is designed for individually named user accounts to connect to the PuriFile engine. The client / server license has the distinct advantage over the single-user license of centralizing policies and user configuration on one server. The client / server license is sold per server. For customers who have many users, we offer both volume-band discounts as well as the PuriFile enterprise license model.

EMBEDDED THREAD

The PuriFile embedded thread license is intended for software integrators who wish to incorporate PuriFile in their product through application programming interface (API) calls to the PuriFile engine or to utilize PuriFile libraries directly in their product. The embedded thread variant of PuriFile is licensed for communication with the third-party product through the software API and is not intended for individually named user accounts. The embedded thread license is sold per instance by number of threads.

EMBEDDED DEVELOPER

The PuriFile embedded developer license is intended for software integrators developing with PuriFile. The embedded developer variant of PuriFile is licensed for non-productions use. The embedded developer license is sold per customer.

ENTERPRISE

For customers with a user base of more than 1,000, the PuriFile enterprise licensing model allows for client / server and single-user / standalone versions over a set term (usually one to three years). Pricing is based on the approximate number of users and affords customers with a much lower cost-per-license.

PURIFILE IN THE CLOUD

For those moving or having moved to cloud-based computing, PuriFile is a fully functional, customizable solution for document cleansing and inspection. Within Amazon Web Services (AWS) you can simply purchase a PuriFile Amazon Machine Image of the single-user / standalone or client server license as shown in previous descriptions.

OTHER PRODUCTS

We offer other products that require an installation of PuriFile to services requests via the network. The installation of PuriFile can be virtualized and implemented on premise or in the cloud, and can service requests from the PuriFile exchange plug-in, PuriFile SharePoint plug-in, PuriFile ICAP, and PuriFile file drop. The PuriFile licence is sold by thread or user dependent on product. Contact PuriFile sales (sales@purifile.com) for more information.
